RETAIL

POLICY—Our aim is to satisfy people who like cactus, by offering varieties which are generally easy to grow and flower — also those plants which are very exotic and spectacular. All our seeds are grown from our own plants and are fresh. Old seeds are thrown out. Our cacti and succulents are either grown or imported by us, hardened in our lath houses, acclimated to heat, cold, rain and other climatical conditions. Our plants are therefore hardier and healthier. Weak or sick plants are eliminated.

We make **no** attempt to meet competitive prices, or make comparisons. We charge according to how slow or fast a plant grows naturally, or as to how difficult a plant is to acquire and how rare a plant is. A certain mark-up is allowed for every plant, over the expense of producing same.

Be assured of better and hardier plants from our gardens, as we do not force plants with fertilizers and year 'round growth. All our plants are fed only natural food — leaf-molds, and are rested every winter — thus assuring the customer a stronger plant with more flowers.

- TERMS Cash, money order or check with order. Minimum order, \$2.00. No C.O.D.,s.
- POSTAGE—Due to higher postage rates, please add 20% of your order for shipments to East of the Mississippi River; add 10% of your order for shipments to West of the Mississippi River. All large specimens such as larger Saguaros, Ferocacti, Organ Pipes, Totems, etc., will be sent F.O.B. Phoenix by freight, charges collect, or Parcel Post — C.O.D.

Always include enough with your order to cover the charges. If too much is sent, it will be returned to you. If too little is sent, we will send less plants.

FOREIGN SHIPMENTS—No plants sent to foreign countries (ie., outside the U.S.A., Hawaii, Alaska and Puerto Rico) unless special arrangements are made. Cactus seeds will be sent to any country—add 10% of order to cover postage. Minimum foreign order, \$10.00, U. S. dollars. If you wish seeds sent via air mail, please add extra amount to cover the higher cost.

- SUBSTITUTES—Always add a few substitute plants or seeds, in case we are temporarily out of stock of certain varieties. It is impossible to keep a 100% full stock always. If no substitute plants are named, and in case we must substitute, we will substitute our own choice.
- GUARANTEE-We do guarantee to send only healthy plants and fresh seeds. All shipments are insured for damage. Buyer agrees to make all the necessary claims, in case of damage, to the carrier. You are assured of our cooperation. Losses or damage, however, are rare. We make every effort to pack well. It is best not to order cacti between December 5th and January 5th-due to slow mails and Christmas rush. Plants or seeds should do well, unless they have been frozen. No plant is guaranteed to grow or flower. Seeds cannot be guaranteed to germinate. These are guarantees controlled by a greater power than ours. Nomenclature cannot be absolutely guaranteed. We name our plants through the help of authorities such as: Britton and Rose, K. Schumann, W. T. Marshall, and others. In many cases, the experts disagree; in such instances we use our own judgment

There are few perfect plants, especially when grown out all year in lathhouses, as our plants are. Cacti are constantly bitten by insects, grasshoppers, and caterpillars. Also sun colors them. So do not be alarmed if you notice a slight scar or tiny hole occasionally on some of the plants. This is natural even though we constantly spray our plants. We always make sure the stock sent you are healthy and not rotted or sickly. Small scars usually grow over. Certain plants as in the Organ Pipe group, rarely, if ever, grow up without scars of some kind.

OUR SPECIALTY—We specialize in Native Arizona cacti, also Cephalocereus senilis, Totem Pole cactus, Arizona Rainbow cactus and Echinomastus.

We raise mostly cacti, very few other succulents; since most of the latter are weedy, and not very winter hardy. The succulents that we list are hardy and interesting plants.

Be assured that our plants are the best that your money can buy.

- SPECIMENS—We have many specimen plants. Write for kind wanted and approximate size. We will quote you prices, size and description.
- WHOLESALERS—Write for our lists and prices on your business stationery.

CULTURE

After receiving plants, cut off dry or broken roots above the break. Let the cuts heal for a day or so before planting, keeping the plant in the shade.

Next, plant in **dry** soil and water once lightly to set the rop soil, so that plant will not fall over. Be sure the pot or

box has drainage—or, if bowl or dish garden is not drained, use plenty of gravel and water lightly only when dry.

Soil should be loose and well drained. Use about onethird part coarse sharp sand (**not** beach sand), one-third part strained top soil, and one-third part old leaf mold (preferably oak leaf)—strained through a quarter inch screen. A little charcoal may be used. If tap water is hard, no lime need be added. If water is soft, add a pinch of powdered garden lime to soil twice a year.

Place your plant where it gets sun and also some shade. Water when soil becomes dry about two inches below sur-

face. In October through March, rest the plants by watering once every 4 to 6 weeks, thereby giving the plant strength to flower in the next season.

Sometimes we send cuts, if we do not have the rooted plant. Place cut in shade until the scar is well healed over. Then place in very sandy soil and water lightly once every two weeks, until rooted. Then plant in regular manner.

SPECIMEN CLUSTERS -

Coryphantha recurvata (Golden Pineapple)

- Large Clusters—5 to 50 heads, average \$2.50 per head. Nice prize clusters from \$12.50 to \$100.00 F. O. B. Phoenix.

- SPECIMEN CRESTS—The following are sometimes available we send either cuts or rooted plants, whichever is available.
 - Echinocereus Bonkerae
 - Echinocereus Boyce Thompsonii
 - Echinocereus Engelmannii

\$10.00 each — plus postage.

"AN INVITATION"

You are cordially invited to visit our famous gardens. We have thousands of visitors every year and our gardens are one of the show places of Arizona.

(We stock many species of cacti in small quantities not listed herein. Please write us your wants; we possibly may have same.)

Parodia Aureispina (Golden Tom Thumb)	
A globular plant, short golden spines with nice I golden flowers.	arge
Small blooming size plants, each	.60
Large specimens, each	2.50
Pachycereus Marginatus (The Organ Pipe Cactus)	
Tall cylindrical, base branching, very short white sp on ribs; one of the neatest of the organ pipe group	
Cuts, approximate average 6", 12", 18", and	
24" – (over 12" F.O.B. Phoenix) per in.	.25

Rebutia Minuscula (<i>The Red Tom Thumb</i>) Rebutias are among the smallest of all cacti, generally mature at one inch in size; very short spines, button shaped, brilliant red flowers. Fine plants, each
Rebutia Violaceum (The Violet Tom Thumb)
Same as R. Minuscula, except very pretty violet flowers.
Plants, each1.00
Rebutia Senilis (The Old Tom Thumb)
Same as above except short, soft grey hairs on plant, scar- let flowers.
Small plants, each 1.25
Rebutia Steinmannii (Steinman's Tom Thumb)
Same as R. Senilis, except longer, stronger spines, cluster- ing, red flowers.
Plants, each
Rebutia Kupperiana (The Black Tom Thumb)
Small globular, very dark plant, lighter spines, red
flowers.
Plants, each 1.00

— S —

Stenocactus Robustus (The Brain Cactus)
Globular, many ribs, plants look like a brain, pretty rose
flowers.
Fine specimens, each 1.75
Selenicereus MacDonaldiae(The Queen Cactus)
Slender, tall, almost spineless stems, largest of all night
blooming flowers. Put cuttings in 8" pot, rich soil, and
should flower in two years. White flowers are from 12"
to 15" across.
Nice cuts, each
Selenicereus Pteranthus (Princess of The Night)
Slender, tall dark stems, a fine night bloomer, white
flowers 10" to 15" across.
Nice cuts, each

— T —

Trichocereus Spachianus (Tower of The Sun)
Tall, columnar, short golden spines — large white night
blooming flowers.
Small plants, each
Larger plants, each 1.00
Specimens, 6" to 12", each 1.25 to 3.50
(The above plant makes fine grafting stock.)
Trichocereus Schickendantzii (The Golden Torch)
Clustering, cylindrical, looks like a miniature organ pipe,
immense white night blooming flowers, short golden
spines.
Small plants, each
Larger plants, each
5" clusters each

6" to 8" specimen clusters, F.O.B. Phoenix, ea. 2.50

Trichocereus huancayensis (<i>The Peruvian Torch</i>) Columnar, from Peru, few short spines, capable of taking 16 degrees frost, beautiful flowers.
Small plants, each
Trichocereus candicans (<i>The Yellow Torch</i>) Stout, cylindrical, medium yellow spines, large flowers. Plants, each
Trichocereus huascha (<i>The Golden Candle</i>) A beautiful plant – medium golden spines, a "must" for "Tricho" collectors. Large cuts, each
Trichocereus thelagonus (<i>South American Torch</i>) Tall, stout, columnar, moderate spines, quick growing – fine flowers. Cuts, per inch
Trichocereus gladiatus (<i>The Gladiator's Torch</i>) Stout, cylindrical, a heavier plant than Trich. candicans, a fine looking plant. Nice specimens, each
Thelocactus bicolor (The Pineapple Cactus) Ball shaped, spines in two to three colors on same plant— beautiful red-purple flowers. Small plants, each .25 3" specimens, each .60 4" to 5" plants, each 1.00

— U —

Utahia sileri (The	e Gypsun	n Barrel)					
A very rare.	Arizona p	olant, glol	bose,	mediu	m heavy	/ spine	es,

21/2" to 3" specimens, female, each	25.00

Echeveria pulvinata (The Velvet Plant)

Fouquieria splendens (Ocotilla or Devil's Coachwhip)	
Long slender spiny stems. When well watered, proc	duces
pretty green leaves along stems. Long red flower	at tip
of stems.	
6" to 12", each	1.50
2' plants, F.O.B., each	3.60
3' plants, F.O.B., each	5.40
Fouquieria Peninsularis (The Mexican Ocotilla)	
Same as above, except larger leaves—curved spines	
6" to 12", each	2.25

Faucaria Sulrueteria (Rainbow Tiger Jaws)	
Small, fat, keel-shaped leaves with tiny teeth. A	pretty
African plant, blooming in the fall with large y	ellow
flowers.	
11/2" to 2", each	.35
2" to 3", each	.60
Large clusters each	1.00

– G –	
-------	--

Graptopetalum Paraguayense (<i>The Ghost Plant</i>) Fleshy, whitish leaves, grows rosette fashion. A I	hardy
succulent.	
Singles, each	.35
Doubles, each	.70
Gasteria Pulchra (Beautiful Bow Tie)	
Long, dark green leaves in opposites – like a boy	w tie,
beautiful light markings, flowers red, white and gr	een-
one of the finest Gasterias.	
Small plants, each	.75
	1 00

3" to 4", each	1.00
Large plants, each	2.00

Haworthia Fasciata (Zebra Plant) Pretty dark green slender leaved rosettes, fine white stripes running cross-wise on leaves. Our best selling succulent. We raise only the "true fasciata." 11/2" to 2", each60 21/2 to 3", each 31/2 to 4", each90 3.00 5" to 6", each 5.00 Haworthia Tessellata (The Green Star) Small dark green star-shaped rosettes, pointed leaves, with checkerboard design on upper face. 11/2" to 2", each75 Larger, each 1.25 Haworthia Chalwinii (Column of Pearls) Short dark green leaves overlapping, up-curving to form a stout column. Tiny pearly white dots on leaves. One of the prettiest of all Haworthias.

Small, each	••••••	.80
Larger, each		1.20

— P —

Pleiospilos Bolusii (1	be African	Split Rock)
------------------------	------------	-------------

This is the largest variety of split rocks; stout, fat, greygreen leaves—blooms in Autumn with large yellow flowers, needs very sandy soil.

1" to 2", each	.35
2" to 3", each	.75
Larger or clusters, each	1.50

Pedilanthus Tithmaloides (The Red Bird Cactus)

A very odd plant, related to the Euphorbias, has a zig-zag main stem, very geometrical; pretty reddish leaves on upper stem, giving appearance of a flying red bird. Leaves die in shipment, will soon appear after transplanting.

8" to 12", each 1.00

_ S _

Sempervivum Calcareum (The Live Forever)	
Small grey-green rosettes, clustering with age-a ha	rdy
plant.	
Singles, each	.25
With pups, each	.60
Sedum Guatamalense (Xmas Cheer)	
Small, fat green leaves, usually tipped with red — t	fine
for dish gardens.	
Small, each	.25
Larger branched, each	.40

- Y -

Yucca species (Spanish Bayonet, or Our Lord's Candle) Sharp, pointed green leaves, rosette shaped, various southwestern species; when older have white or lavender flower stalks.

Small plants, each	1.25
7" to 12" plants, each	2.25
Larger plants, to 21/2', F.O.B., each	7.50

We stock many species of succulents in small quantities – not listed herein. Please write us your wants; we possibly may have same.
